

Acoustex line

Acoustex line provides an elegant, uniform ceiling surface with no visible joints, and the peaceful look characteristic of timber batten ceilings.

Acoustex line acoustic panels have lengthwise surface grooves. Each panel has ten evenly spaced grooves.

When the acoustic panels are joined together, the grooves are continuous along the entire surface, offering a seamless look. Each long side of the panel has a half groove, so that an extra groove is formed where panels are joined on the wall or ceiling.
